By Frank. B. Livingstone, Jonathan Marks : Abnormal Hemoglobins in Human Populations the history of genetics and the study of malaria are inextricably linked the burden of disease due to malaria across delta beta fusion delta 87 to beta 116 is the molecular lesion different hemoglobins lepore show evidence that the Abnormal

Hemoglobins in Human Populations:

Research on abnormal human hemoglobins protein in blood that carries oxygen has taught us about the inheritance biochemistry and distribution of these traits This knowledge coupled with mathematical research using computer models of population genetics has enabled researchers to marry biological fact and genetic theory This volume places medical understanding in an evolutionary framework Using published data on the frequencies of abnormal hemoglobins in the worl During the past fifteen years many thousands of human subjects from most parts of the world have been investigated for hemoglobin variants and glucose 6 phosphate dehydrogenase G 6 PD deficiency The observations have been widely scattered in medical
