**From CRC Press : Cytogenetics, FISH and Molecular Testing in Hematologic Malignancies** cytogenetics fluorescence in situ hybridization fish and molecular tests especially polymerase chain reaction pcr play cytogenetics fish and molecular testing in hematologic malignancies wojciech gorczyca md phd genzyme genetics new york Cytogenetics, FISH and Molecular Testing in Hematologic Malignancies:

0 of 0 review helpful Brave new molecular world By Stanislav Grinberg As a PhD graduate beginning my Clinical Molecular Genetics fellowship I highly recommend this new text as a review of the known cytogenetic and molecular

abnormalities causing hematological malignancies This is a continuation of the great series of books from Dr Gorczyca who realizes that there is a shift in hematopathology away from plain morphol Cytogenetics fluorescence in situ hybridization FISH and molecular tests especially polymerase chain reaction PCR play an important role in the management of patients with hematologic malignancies by helping to establish the diagnosis as well as predict prognosis response to treatment and disease progression Chromosomal and molecular abnormalities provide the most reliable criteria for classification of hematopoietic tumors and often comprise the basis for t About the Author Director of Hematopathology Oncology Services New York Genzyme Genetics USA
