By Giovanni P. Galdi, Rolf Rannacher, Anne M. Robertson, Stefan Turek : Hemodynamical Flows: Modeling, Analysis and Simulation (Oberwolfach Seminars) Hemodynamical Flows: Modeling, Analysis and Simulation (Oberwolfach Seminars):

This book surveys research results on the physical and mathematical modeling as well as the numerical simulation of complex fluid and structural mechanical processes occurring in the human blood circulation system. Topics treated include continuum mechanical description, choice of suitable liquid and wall models, mathematical analysis of coupled models, numerical methods for flow simulation, parameter identification and model calibration, fluid-solid interaction, etc. From the reviews: "This volume consists of six contributions concerning mathematical tools and analysis for the blood flow in arteries and veins. . . . This book will be handy for those who are interested in the description of the flows of fluids with unus
